Summary

Backend Developer with 2+ year of hands-on experience building and maintaining enterprise ERP modules for the **aerospace manufacturing domain** using **PHP, MySQL, MariaDB, and RESTful APIs**. Delivered 8+ modules — including production scheduling (DCP), GRN validation, master pricing, audit trail, and planning reports — serving **100+ daily users**. Proven ability to implement complex business logic, optimize SQL query performance, build backend APIs, and conduct white-box testing. Comfortable with **version control (Git), Postman, and agile development workflows**. Open to Backend Developer roles in PHP or Java Spring Boot.

Experience

Junior ERP Developer

Apr 2024 – Present

Fluent Soft Technologies, Bangalore

- Engineered and maintained 8+ core ERP modules in PHP and MySQL serving 100+ daily users in an aerospace manufacturing environment.
- Performed white-box testing across all modules to validate business logic, database operations, and edge-case handling.
- Delivered modules spanning Stores, GRN, Production (DCP), Master Pricing, Purchasing, Audit Trail, and Planning Reports.

Production – Detail Capacity Planning (DCP)

- Built machine-wise scheduling engine that auto-calculates operation start/end times across 10+ machines based on live stock availability.
- Implemented multi-level operation dependency logic, reducing manual scheduling effort by an estimated 70%.
- Scheduling engine handles 500+ work orders per production cycle with conflict detection across parallel machine groups.

Pre-GRN & GRN

- Implemented invoice validation between Pre-GRN and GRN, preventing cost overruns across 500+ monthly purchase transactions.
- Configured approval workflow for price deviations, reducing unauthorized GRN approvals to near zero.
- Ensured GRN cost caps were enforced automatically, eliminating manual cross-checks by the procurement team.

Master Parts Pricing

- Built comparison engine for awarded vs. purchase prices across 4 part categories (RM, bought-out, consumable, SP) with percentage variance calculation.
- Triggered automated approval workflows on price deviation, cutting review cycle time by ~40%.

Planning & Production Reports

- Delivered 6+ machine-level and part-level planning reports used daily by production managers across 3 shifts.
- Built scheduled vs. produced quantity comparison from live work order data, improving on-time delivery visibility.
- Implemented QA workload tracking and automated ETA calculations, reducing manual follow-ups by the QA team.

Software Audit Trail

- Implemented system-wide audit trail covering 15+ modules, logging all data changes with user, timestamp, and before/after values.
- Built value comparison engine that matches submitted form data directly against backend DB records for discrepancy detection.

API Development

- Developed REST API to retrieve treatment cost data from an internal treatment ERP, eliminating manual data entry for the SPO department.
- API generates cost reports consumed by 3+ departments, reducing report turnaround from 1 day to real-time.

SQL Performance Optimization

- Optimized 10+ slow queries by removing redundant joins and rewriting logic, reducing average report load time by ~60%.
- Replaced repeated DB calls with in-memory PHP arrays, cutting page load time on heavy reports from ~8s to under 2s.

Education

B.E., Information Science & Engineering
Sambhram Institute of Technology, Bangalore

2018 – 2023

Skills

Professional Skills

Languages: PHP, JavaScript, SQL

Databases: MySQL, MariaDB, JDBC

Tools & APIs: Git, Postman, RESTful APIs

Web: HTML, CSS

Additional Skills

Languages: Java (*self-learned, certified — JSpiders Java Full Stack, Bangalore*)

Frameworks: Spring Boot, Hibernate

Libraries: React.js (Basic)

Achievements & Certifications

- 1st Place – ZP Robo Camp (2019)
- Java Full Stack Software Development – JSpiders, Bangalore

Hobbies

Music | Mobile Photography | Cooking
